RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Dimensions: 9.7in. x 7.4in. x 0.2in.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 edition. Excerpt: . . . as a special case of the quadratic or cubic function. Example 1. --In the case of the cone or pyramid, Art. 155, x2 it is seen that Ax Ah is a quadratic function of x, and Example 2. --In the case of the sphere, a2--x2 Example 4. --The prismoid shown in figure is composed of a prism, a wedge, and two pyramids. Let Ao be the smaller end section, Ah the larger, and Am the mid section. V Aoh g (Ao Ao 4 A0), for prism, 7 Ah (p Ah 4 for wedge, V I jj (o Ai for pyramid. The formula is seen to hold for the three forms of solids composing the prismoid. As a practical case, let the figure represent a section of a railway embankment 100 feet in length. A fill of 10 ft. with side slopes to 1, makes Ao 250 sq. ft. A fill of 20 ft. with side slopes l to 1, makes Ah 800 sq. ft. A fill of 15 ft. with side slopes H to 1, makes 4 Am 1950 sq. ft. Hence, V (250 800 1950) 50, 000 cu. ft. Here V ft2 (Ao Ah) (250 800) 52, 500 cu. ft. , by average end areas. V hAm 100 X 487. 5 48, 750 cu. ft. , by mean area. It is seen that the error of the approximation by the average end areas is twice that by mean area and of opposite sign....
